

Nursing at the Forefront: Advancing Collaborative, Personalized, and Equitable Healthcare

Dr. Janet Alexis A. De los Santos
*College of Nursing,
Visayas State University,
Philippines*

The future of nursing research is poised to transform healthcare by addressing emerging challenges through collaborative, innovative, and patient-centered approaches. These incorporate technological advancements to revolutionize and optimize care for inpatient and public health needs. The approaches are anchored on collaborative management, emphasizing teamwork among healthcare professionals with the end goal of improving health outcomes. Collaborative opportunities will include technological and innovative techniques in health management, nursing leadership, policy research, ethical and legal issues, health disparities, mental health, chronic care, and, more urgently, a more responsive approach to pandemic preparedness and climate change. These collaborative efforts will ensure that nursing remains central to advancing healthcare quality, equity, and accessibility in an increasingly complex healthcare landscape.
